CAREER DEVELOPMENT

Executive Summary

Career development aims to raise our knowledge and awareness of their own goals, strengths and values. To achieve this goals, our Technology and Information System's course lecturer, Dr. Aryati introduce us two talks which held on 23th and 28th of October 2023 respectively. Our first industry talk given by Mr. Habib from GetMe Hired company at Dewan Seminar N28 UTMJB. Second industry talk given by PPG company at UTM Recreational Forest.

Introduction

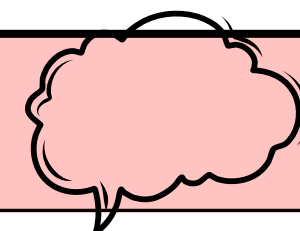

Computer science can be incredibly helps us in career development. For example, problem solving skills, technical skills, communication skills, adaptability and job opportunities. GetMe Hired introduced us on how can we do preparation start from today for getting a completeness resume. Besides, PPG also pass on experience on what is the roll of Data Engineering in their company.

Content of Talk

Mr. Habib introduced technology from GetMe Hired which is ATS CV to used as our resume compare from traditional infographic resume. This is because ATS CV will be easier to read, contain valuable content and information, and could pass any Applicant Tracking System that has been used by big companies to filter high-quality candidates. Next, PPG company bring into contact with the best things found in PPG and how do staffs do visualization, modelling, programming and framework development. They also let us know we must have important technical skills to become an intern at PPG

Reflection

The insight I have gained from both industry talk is how important is this course and what can I do for preparation to applying a company in the future. From first talk I knew that I should have proper attitude when doing assignment or attending a lecture. I should record update the achievement and project I did from time by time in my resume so I won't get lost or forgot something that might inspire the company to choose me as their intern. Besides, I knew that the work line and the position as a data engineer in a big company from second talk. I should expert in those application that always used by the engineer to easier me in the future time. Other than that, I think career in ICT is essential to play a meaningful role in industry is because it makes communication more effectively, simplifies corporate processes and promotes innovation and teamwork across a range of industry.
